TECHNICAL INFORMATION

National Bioengineered Food Disclosure Standard

To whom it may concern:

Blue Diamond co-operatives utilize only traditional breeding technique to grow our almonds in California. More specifically, our almonds do not contain materials whose genetic makeup have been modified using vitro recombinant DNA methods, also called gene slicing, gene modification, or transgenic technology.

As defined under USDA National Bioengineered Food Disclosure Standard 7CFR Part 66 [Doc. No. AMS-TM-17-0050], article II, subpart C (1), Blue Diamond almonds are not bioengineered foods and therefore products are not subject to bioengineered food disclosure requirement.

Please do not hesitate to contact us for any additional questions.

Sincerely,

_____
