Nutritional Information – Bacterial Dairy Cultures

Due to the low inoculation rate for Chr. Hansen's frozen and freeze dried dairy bacteria, the influence on the nutritional value of the final dairy product is not seen to have any significant impact on applications.

The cultures are grown in substrates based primarily on milk ingredients, and substrate components vary according to the particular strain being grown, but for your information, the following nutritional results are average for the products. The analyzed products do not include Dairy Alternative cultures.

Chemical analysis*	**Frozen cultures**		**Freeze-dried cultures**	
	Average	Range	Average	Range
Energy [kJ/100g] (Calculated)	230	N.a.	1200	N.a.
Protein (N x 6.25) [%]	11	7-20	57	47-63
Carbohydrate [%]	2	0-5	11	N.a.*
Fat [%]	0.3	0-1	1.1	0-2
Water [%]	84	76-91	7	5-10
Sodium (Na) [mg/kg]	10025	400-32000	58500	N.a.*
Salt corresponding to sodium [%] (=sodium x 2.5; no salt is added)	2.5	N.a.**	14.6	N.a.**

* The sodium and carbohydrate content of freeze dried cultures are not measured, but calculated based on sodium results obtained from frozen cultures.
**Salt corresponding to sodium is calculated, no salt is added.

Yours sincerely
