BE (Bioengineered) STATEMENT

Enzyme Modified Cheese, Natural Dairy Flavor, Natural Cheese Flavor

TO: Our valued Customer

DATE: March 23, 2023

Cheese, which is used to manufacture enzyme modified cheese, natural dairy flavor, and natural cheese flavor uses microbial rennet. As we all agree, microbial rennet is a bioengineered product by definition. However with respect to the National Bioengineered Food Disclosure Standards (NBFDS) codified in 7 CFR, Part 66, microbial rennet does not require mandatory disclosure of the final food product as bioengineered per the criteria in the code.

Specifically, to the best of our knowledge, it is Jeneil Biotech's view that microbial rennet is considered an incidental additive in our manufacturing process. "*With respect to treatment of yeasts, enzymes, or any other microorganisms, AMS agrees that if they qualify as incidental additives that are not required to be labeled as ingredients on a food label, then they do not require disclosure as BE foods."* It is our opinion that microbial rennet in the cheese that is used for further manufacture in an enzyme modified cheese, natural dairy flavor, or natural cheese flavor, fits the definition of §101.100(a)(3). For the purposes of §101.100(a) (3), incidental additives are defined as: *'substances that are added to a food for their technical or functional effect in the processing but are present in the finished food at insignificant levels and do not have any technical or functional effect in that food,"* in this case – in the enzyme modified cheese, natural dairy flavor or natural cheese flavor.

In summary, our corporate position is the enzyme modified cheese, natural dairy flavor, and natural cheese flavor products manufactured by Jeneil Biotech, Inc. are not subject to Bioengineered (BE) labeling under NBFDS, codified in 7 CFR Part 66 and the above products are in full compliance with the European Union (EU) regulations 1829/2003 and 1830/2003.

Sincerely,

Victoria Skebba
