Blommer Statement

Subject: Chocolate, Cocoa Butter, and Cocoa Products statement regarding, Hexane, synthetics, irradiation, sewer sludge, Organochlorines, PCBs, Dioxins, Radionucleotides, 3-MCPD, GE (Glycidol esters), Propylene Oxide

This letter is to inform you that Chocolate Products are non-hexane or chemically extracted, is not made from synthetics, is not irradiated, and is not made with sewer sludge.

Organochlorines are monitored during pesticide testing audit of cocoa nibs. PCBs are not a concern at our facilities.

According to the EPA exposures to dioxins have declined so much in the last two decades that most people are safe and lifetime exposure does not pose a significant health risk. Target products would be fish, meat and other animal by products which are not associated with chocolate. City water is used and monitored for potablility and heavy metals. No burning is performed.

Radionucleotides are associated with drinking water. Water quality is monitored by the local water authority and meets all federal and state requirements in compliance with 40 CFR Part 141.

3-MCPD and glycidol esters are not a concern as hydrochloric acid and high temperatures (>200C) are not used in the manufacturing process of cocoa butters.

Propylene Oxide is used in agriculture as an insecticide fumigant or sterilant. We do not use this to manufacture products.
