Blommer **CHOCOLATE COMPANY**

East Greenville, PA • Chicago, IL • Union City, CA

Date: May 2019

Memo to: Our Valued Customers

From: Blommer Chocolate Company

Subject: Blommer Roasting Systems Validations

Locations: Campbellford, Ontario Canada
Chicago, IL
East Greenville, PA
Union City, CA

FDA has not yet mandated a definitive publication on standard requirements for process validations but there have been several supporting documents and FDA statements on expectations for these types of studies.
The primary industry standard to have emerged in the last several years is the demonstration of a 5-log pathogen kill.

Blommer currently utilizes several different roasting systems which have different time/temperature requirements in order to achieve our desired minimum 5 log kill rate for the pathogen Salmonella.

All roasting systems have been validated by an external qualified source to ensure Blommer plants are meeting the minimum kill rate.
Specific parameters are proprietary and are adjusted based on the roasting system utilized.

Any changes to the system impacting the product would require a re-validation of the roaster system.
