Memo To: Our Valued Customers

From: Blommer Chocolate Company

Date: April 15, 2019

Re: rBST Statement

BST is a protein-based natural growth hormone that can be found in the pituitary glands of all cows. rBST is a synthesized BST. The United States Department of Agriculture ("USDA") has determined that because rBST is a species-specific protein growth hormone, milk from rBST treated cows is identical to that of cows not treated with the hormone.

Further, the United States Food and Drug Administration ("FDA") has determined that milk from cows treated with rBST is safe for human consumption and has allowed its sale since February 3, 1994. Currently there is no practical test available to determine if milk is or is not from a cow treated with rBST.

Blommer Chocolate Company is committed to providing our customers with dairy-containing products that are safe for human consumption and that fully comply with Governmental regulations. While a large portion of the dairy products come with a statement that the milk we receive does not use Bovine Growth Hormone, Blommer Chocolate cannot certify that all milk ingredients we receive are not from cows which have been treated with rBST.

If you require any additional information, please contact our Regulatory Department at 1-800-825-8181.
